

Digital Phenotype Mental Health Prediction - Avison Symposium Excerpt

Public-safe technical excerpt derived from the original project output.

Source: 23rd Avison Biomedical Symposium 2026 presentation

Data structure

1,000 participants: 700 general adults and 300 college students. After feature engineering, 42 input features were used.

Model

LSTM sequence modeling using ordered daily digital phenotype / EMA records.

Results

PHQ-9 test R^2 : 0.6312. GAD-7 test R^2 : 0.6159.

Interpretation

The model outputs were positioned as supportive monitoring indicators rather than standalone clinical diagnoses.
